To Whom It May Concern:

I am Dr R.H. Anderson from a clinic in Southern California in which the clinic is in 24 hour operation. During my tenure here I have had the privilege to work with Dr Marty Henderson as he had done numerous ultrasounds on our patients. During this time I'd like to express some findings and observations:

- Marty is very professional and a man of his word
- His proficiency in Ultrasound is unparalleled in the kind of information he relates. For example he diagnosed an abdominal ascities case as extreme Heart Failure and gave a prognosis that was within 1 hour of its passing.
- His extraordinary skill has allowed our clinic to expand not only our profit but client base due to the ultrasound ability to get a better view of organs than possible excluding histopathology and his ability to find lesions I doubt others could. The suggested biopsies/medications and helping integrate the case has been invaluable.
- My resulting case recommendations have now become, if in doubt or to be sure, to do an ultrasound. Also any patient on heart medication needs an echo cardiogram as the prognostic information is so important to the client it is impossible to express till you start doing them.

In conclusion I would be proud to talk with any one who would consider either the use of ultrasound in a busy practical practice and also to personally relocate the stellar skill possessed by Dr Henderson.

Robert H Anderson, DVM
